

MIRRORVISION™ GLASS OVERLAYS

Mirrorvision 'reflections technology' is available as a 6mm optical glass panel which can be cut to size (toughened / tempered) then placed over the front of any LCD / LED / Plasma monitor or TV transforming it into a mirrored screen. When the screen is switched on the PC / TV images magically appear through the optical mirror glass, then when the display device is switched off the screen surface reverts back to a normal mirror. This unique optical lens glass enhances the picture quality of any screen giving you a better overall visual effect. The mirror overlays can be supplied as a glass panel with polished edges or with a choice of decorative frames to suit any contemporary or traditional interior. Standard screen sizes are available with blacked out borders and oversized mirror glass panels for single or multi monitors (landscape or portrait) with a maximum standard glass size of 1800 x 1500mm (71" x 59"). Mirrorvision glass overlays transform the screen, allowing it to become an integral part of the room's décor. Mirror touch screen glass overlays now available.
