

PRODISPLAY®

ANTI-GLARE FILM

Pro Display Anti-Glare/Anti-Reflective film provides the ideal solution to reduce glare and to diffuse harsh reflections on screens affected by high ambient light and sunlight. This optical film is available as a self-adhesive retrofit product designed for installation directly to a hard screen surface or alternatively, to an additional clear acrylic or glass overlay.

Our Anti-Glare/Anti-Reflective film can also be installed directly to store windows, video walls, glass partitions and other flat surfaces causing glare or reflection. The surface of the film includes a UV stable hard coating, forming an impact resistant shield that is anti-scratch, antigraffiti and chemical resistant. The film has excellent dimensional stability for near zero shrinkage.

The film is only 130 microns thick and transmits 92% of light, ensuring that maximum image fidelity is maintained. The matt finish also provides a super smooth low-friction surface for touch screen displays and is durable and easy to clean.

SPECIFICATIONS

- Clear matt film with self-adhesive layer
- Optical anti-glare surface
- Chemical /scratch resistant & anti graffiti
- 92% transmission with 9% haze
- For hard surfaces like Smart TV's & Monitors

BENEFITS

- Reduces glare and reflections
- Suitable for outdoor use
- Self-adhesive & easy to apply
- Anti-friction surface ideal for touch
- Anti-Glare Overlay options available

APPLICATIONS

- Bus/train stations & airports
- Retail stores & window displays
- Education & training
- Information points
- Touch tables & signage
