

PRODISPLAY®

ANTI-GLARE GLASS

Pro Display protective Anti-Glare overlays provide the ideal solution to reduce glare and to diffuse harsh reflections on screens affected by high ambient light and sunlight.

The surface of the Protective Anti-Glare Overlay includes a UV stable hard coating, forming an impact resistant shield. The matt finish also provides a super smooth non-friction surface for touch screen displays and is durable and easy to clean. Our Protective Anti-Glare Overlays offer not only a great solution for high-brightness applications, but they also offer a simple solution for protection.

Screens without a protective fascia, such as many LCD and plasma, may require extra protection for applications in heavy use environments, making these overlays ideal for use in such applications with high brightness.

SPECIFICATIONS

- Optical anti-glare coating
- Chemical and scratch resistant
- Anti-graffiti
- 92% transmission with 9% haze
- For soft screens like Smart TV's & Monitors

BENEFITS

- Reduces glare and reflections
- Suitable for outdoor use
- Minimal impact on image quality
- Anti-friction surface ideal for touch
- Anti-Glare Film options available

APPLICATIONS

- Bus/train stations & airports
- Retail stores & window displays
- Education & training
- Information points
- Touch tables & signage
