

**PRODISPLAY**

**HIGH BRIGHTNESS DISPLAY**

Pro Display's High Brightness Display offers a sun readable LCD screen that's ideal for window advertising and environments where lighting cannot be controlled. Our High Brightness Screens are available in a range of standard sizes from 32"-65" and are suitable for 24/7 operation, allowing you to broadcast your message even after closing time.

Our screens are manufactured to perform in high ambient lighting environments, with options for 1,500 to 2,500nits brightness. These screens are ideal for applications like retail stores & shopping centres and airport & rail stations.

Our High Brightness Screens are simple to set up, manufactured with an integrated media player for USB playback as well as connection for external devices to connect your own media player or PC. We also manufacture outdoor IP65 rated high brightness screens as well as touch screen options that can be used through glass to create an interactive window display.
