

PRODISPLAY[®]

INDOOR LED SCREENS

Pro Display's Indoor LED Screens offer a robust, high brightness display that's ideal for high traffic environments. Available in a range of pixel pitches (resolutions) from 0.9mm to 10mm*, our LED screens cater for both high quality up close viewing, best suited to retail environments and long distance applications like stadiums, live events & concerts.

Shipped modularly our Indoor LED Screens can be easily rearranged and reformatted to produce larger LED screens in different shapes, offering wide viewing angles and brightnesses from 1,000 - 4,000nits.

Our Indoor LED Screens are simple to set up coming complete with the modular LED panels, control system and basic operating software to get you up and running in no time. Depending on your installation, we can offer both front and rear access options for screen maintenance, catering for a wide range of housing and mounting methods.
