

PRODISPLAY

INTERACTIVE PCAP TOUCH FOILS

Pro Display's Interactive Touch foils transform any glass or acrylic surface into a touch screen, making them the ideal choice for interactive store window displays. The optically clear foil is manufactured in single, dual and multi touch solutions in a range of standard screen sizes, with our most popular multi-touch foils available from 32" - 86" with custom sizes available on request.

Touch Foils have an electrostatic cling liner laminated to the surface, making it ideal for both permanent and temporary installations. Interactive Touch Foils are designed for use with LED / LCD screens and come as a kit which can be simply installed within minutes. Our Interactive Touch Foils offer greater stability and reliability than other competing projected capacitance foils in the market and include Windows control software and a detachable USB controller board digitally approved by Microsoft.

We also offer PCAP Projection Foils, combining our most popular rear projection films with our touch foils to create a retrofit interactive rear projection solution that's ideal for window displays.

SPECIFICATIONS

- Projective Capacitive touch technology
- Single, Dual and Multi-touch options
- USB HID technology
- Self-adhesive film for glass or acrylic
- Standard screen sizes - 27"-86"

BENEFITS

- For use with LCD/LED screens
- Single touch works up to 20mm thick
- Dual touch works up to 6mm thick
