

PRODISPLAY[®]

INTERACTIVE PROJECTION FOILS

Pro Display's Multi-Touch Projection Foils transform any glass or acrylic surface into a multi-touch interactive screen, ideal for through-glass window displays. The foils are designed for rear projection and can be installed within minutes.

Each Multi-Touch Projection Foil comes with one of four types of projection material:

- SunScreen – unique sun readable optical screen for displays in direct sunlight;
- Pro Diffusion – balanced high contrast / high brightness diffusion material for general display & window applications;
- Ultra Black – ultra high contrast diffusion material for high-end video applications;
- Clearview – special transparent / holographic projection material for general display & window applications.

With up to 40 point multi-touch, high resolution controller and super fast response times, our foils will deliver the very best immersive, responsive touch experience.
