

PRODISPLAY

MIRRORVISION SMART TV

Mirrorvision mirror TV screens have a unique optical glass surface (lens) that enhances the picture quality of the LCD / LED panel. This special 'Reflections' technology transforms the TV into a mirrored screen. When the screen is switched on, the images magically appear through the optical mirror TV glass, then when the display device is switched off the screen surface reverts back to a normal mirror. Mirrorvision mirror TVs come with a choice of standard decorative frame designs to suit any contemporary or traditional interior (optional custom frames available).

The screens have a blacked out video border back painted onto the rear of the mirror glass, with a cut-out for the screen of the TV behind. Coloured back painting options are available upon request. In order to offer our customers the very best, they can choose from a range of TVs (makes and models) utilising either LCD or LED technology. Standard screen sizes range from 32"-75" diagonal (custom sizes available to order). Mirrorvision mirror TVs transform any space, allowing the screen to become an integral part of any room's décor.
