

**PRODISPLAY**<sup>®</sup>

**PVC PROJECTION FILM**

Create versatile projection displays with our flexible PVC Projection Film, ideal for use in museums and TV, film & broadcasting applications. Available in either high contrast grey or high gain white, our PVC film can be used with front, rear or dual projection to produce stunning 4K/HD images on a huge scale.

With built in diffusion technology, our PVC film screens overcome hot spotting whilst offering wide viewing angles in rear projection applications. We can also offer solutions that support active & passive 3D projection and edge blending if required.

The flexible nature of our PVC screens means they can be used in wildly different applications, from suspended ceiling installations where the screens appear animated as well as tensioned in bespoke metal frameworks to create curved rear projection screens, like the one used in the BAFTA and Academy Award nominated Netflix film, 'The Midnight Sky'.

## SPECIFICATIONS

- Flexible PVC fabric projection film
- White and grey colour options
- Front rear & dual projection options
- Active or passive 3D options available
- Available in sizes up to 10m x 3m

## BENEFITS

- Creates animated displays when suspended
