

PRODISPLAY[®]

PRO DIFFUSION REAR PROJECTION FILM

Pro Diffusion film is a high contrast rear projection film primarily used for store window displays and high end video applications. Dark grey in colour, this self-adhesive projection film offers a cost effective display solution designed to get the most out of low-end, budget projectors.

This unique high resolution screen technology offers superior brightness, contrast and black levels even in high ambient light and daylight. The film is available in a range of standard screen sizes (32" - 120"), in wholesale roll format (10 & 30 metre rolls) or by the linear metre off the roll (1524mm / 60" wide).

Custom shapes and sizes are also available and pieces can be simply joined to create large format displays. Pro Diffusion film has a self adhesive layer (peel and stick) making it easy to apply to glass or Plexiglas.

SPECIFICATIONS

- Dark grey with self-adhesive layer
- Transmission - 62%
- 100 Micron thickness
- Viewing angle - 120°
- Standard film sizes from 32"-120"

BENEFITS
