

**PRODISPLAY**<sup>®</sup>

**PROJECTION MAPPING FILM**

Projection Mapping Film is a specialist projection solution that enables synchronised projection onto, irregular, split or non-flat surfaces. Unlike flat / 2D systems, a projection mapping system is highly versatile and can be adapted to bend around surfaces or mould to shapes, facilitating projection onto complex landscapes that traditional flat projection systems cannot achieve.

With a wide variety of applications, using Projection Mapping Film from Pro Display can provide a highly effective system that is fine tuned to the specifier's requirements. Projection Mapping Film is a dry application cling adhesive film that doesn't leave any residue after removal, making it a clean and easy system to dismantle if its redundancy is up in temporary applications.

As a front projection technology, Projection Mapping Film enables immensely large and complex projection systems to operate with efficiency, with both indoor and outdoor film options depending on the type of install.

## SPECIFICATIONS

- Material - PVC
- Gain - 1
- Temperature range - -30°C - 50°C
- 100 Micron thickness
- Adhesive - Re-positionable dot adhesive

## BENEFITS

- Enables projection onto non-flat surfaces
- Supports 4K or HD rear projection
- Dry application & removable
- Ideal for edge blending
- Indoor & outdoor options available

## APPLICATIONS

- Trade shows & exhibitions
- Large format projection applications
- Live events
- Stadiums & arenas
- Product launches
