

PRODISPLAY[®]

SWITCHABLE GLASS PROJECTION SCREEN

These unique switchable glass screens come complete with a wired cable suspension system, 110V transformer and RF remote control switch. A simple ON - OFF mode switches the glass from being clear (transparent) to frosted (translucent) and in its frosted state the glass becomes a high definition rear projection screen (front/dual projection versions available).

Standard screen sizes range from 50" - 120" or custom sizes are available upon request. Alternatively panels can be manufactured to any size and joined to create large format displays.

These switchable glass screens have a very minimal look which will blend easily into any architectural or contemporary interior, making them the ideal screen choice for both historical buildings (churches, museums, theatres and concert halls) and modern hi-tech environments (hotels, offices, stadiums, shopping malls)

SPECIFICATIONS

- Toughened Switchable Smart Glass
- On - Transparent, Off - Translucent
- Switches in under a second
- Power - 50V (50/60Hz)
- Standard screen sizes from 42"-145"
