

PRODISPLAY®

TRANSPARENT LCD SHOWCASE

Our Transparent LCD Showcases bring a whole new creative angle to retail, information and entertainment displays. Offering a complete display case solution, our showcases arrive ready to use coming complete with USB, HDMI & VGA connections allowing you to attach a media player, PC or laptop to start playing content instantly.

With Transparent LCD Showcases, the screen controls what viewers see (or don't see) behind it, utilising white content to create transparency. This opens up new avenues for retail displays, kiosks and booths, and is especially suited to new product launches and promotions.

Transparent LCD Display Cases come manufactured with the right housing and backlight to create the highest quality display, but we can also offer raw Transparent LCD Displays designed to integrate into your own housing. We can create bespoke housings & furniture to suit your application including customising our showcases with custom designs, finishes and branding.
