

PRODISPLAY[®]

ULTRA BLACK REAR PROJECTION FILM

Ultra Black is a new and unique black tinted rear projection film providing unsurpassed contrast, resolution and colour reproduction. Ultra Black provides sharp, crystal clear and bright images at all angles.

This projection film technology has been designed for high end video and advertising, and is especially suited to control room, home cinema and multi-screen applications. Ultra Black provides a cost effective alternative to other black screen technologies offering superior screen resolution, contrast and black levels.

Applied to any glass or acrylic surface, this rear projection film works best when teamed with a powerful projector to deliver bright whites and strong colours to contrast with our unique black diffusion material. The result is a truly stunning image that never fails to stop people in their tracks.

SPECIFICATIONS
