

**PRODISPLAY**<sup>®</sup>

**ULTRA GAIN FRONT PROJECTION SCREEN**

Ultra Gain is a specialist front projection screen primarily used in installation where there is high ambient light / daylight. This unique screen technology offers the brightest front projection images, making it the ideal solution for areas where the lighting cannot be controlled.

The screen is available in a range of standard screen sizes from 42" - 134". Custom shapes and sizes are available and multiple panels can be joined to create large format displays. For screen sizes above 134" diagonal we recommend using 72" screens as modular panels to create large format projection walls.

We also offer a retrofit self-adhesive version of our Ultra Gain Front Projection technology which can be easily applied to existing glass or Plexiglas surfaces.

## SPECIFICATIONS

- Silver rigid acrylic optical screen
- Horizontal half gain - +/- 45°
- Vertical half gain - +/- 40°
- Viewing Angle - 160°
- Standard screen sizes from 42"-134"

## BENEFITS

- Superior brightness & colour reproduction
- Performs in high ambient light/daylight
