

# PRODISPLAY®

## ULTRAVISION FRONT PROJECTION SCREEN

Ultravision is a special front projection foiled screen which has been developed for all high end audio visual installs, especially in venues with high ambient light / daylight. This unique high resolution (HD) screen technology offers superior brightness, contrast and black levels, to re create life like images with perfect colour reproduction.

No need to turn down the lights, you will still achieve bright vivid images with up to 10 times the contrast and 5 times the brightness of conventional screens. Ultravision was recently put to the test against other competing screen technologies in Japan and came out top in terms of brightness and contrast levels.

When brightness, clarity and contrast are an important part of your visual presentation, there's only one solution. This Ultravision screen is available in standard screen sizes 42" - 134" with modular panels available to create large format seamless displays.

### SPECIFICATIONS
