INFRARED TOUCH OVERLAY

Infrared Touch Overlays are designed for areas with heavy footfall providing access to information, entertainment and commerce applications. The frames connect to any PC or Laptop, instantly creating multi-touch interaction with browsers, PDF documents, Office applications and more. Our unique Interactive Frames offer a true multi-touch experience transforming any screen or surface into an interactive display.

Whether it's an existing screen, video wall or table, IR overlays offer the perfect choice. Infrared touch overlays are compatible with LCD, LED, Plasma or Projection displays and come as a retro-fit kit which can be installed in minutes. Simply connect the USB cable and the overlay is recognised as a regular input device (just like a mouse) without the need for additional drivers.

You have a choice of 6- or 10-point infrared multi touch – both deliver a smooth and rapid touch experience. Frames are available in standard diagonal screen sizes from 31.5" up to 98", and also in custom sizes to suit your specific needs.
