

PRODISPLAY®

INTERACTIVE LCD VIDEO WALL DISPLAY

Pro Display's Interactive Video Walls combine high quality 24/7 LCD displays with our Infrared Touch Overlays to create large format interactive walls. Typically using either 49" or 55" screens popular video wall formats include 3 x 55", 4 x 55", 6 x 55", 9 x 55" and 12 x 55".

Available with 6, 12 or 32 touch points, we can accommodate screens in sizes up to 10m x 3m wide which can be engaged with using a finger, gloved hand or pointer. We use LCD screens with narrow bezels to keep our video walls slimline with a minimal footprint, with our Infrared Overlays connecting easily to any existing PC using USB HID technology.

We offer a range of customisation options for our Interactive Video Walls including custom sized LCD screens and non-touch options, as well as the choice to add a mirrored fascia where the images appear through the glass. We can also create Interactive LED Walls in sizes up to 10m x 3m for applications that don't want join lines or struggle with high ambient lighting .
