

PRODISPLAY®

TOUCH SCREEN KIOSK

Create engaging interactive displays with our range of Touch Screen Kiosks, ideal for high traffic environments like shopping centres, museums and hotels. Kiosks are one of the most popular choices for interactive signage, due to their ease to set up and move around your space.

The easily recognisable nature of kiosks makes them more attractive to potential users, and ours come with a full HD 1080p screen that's suitable for 24/7 usage. Choosing between 43" and 55" screen sizes, these high resolution screens are fitted with a protective glass fascia to prolong the life of the screen and are granted interactivity using 10-point infrared multi-touch technology.

Our kiosks can be loaded with content with little fuss, coming integrated with Android / Windows. Our kiosks can also be customised with your branding, logos & designs for a more memorable experience. Outdoor, Landscape & PCAP touch options are also available.
