RETRO-FIT
SOLUTION

SELF
ADHESIVE

Overview

Pro Display Anti-Glare/Anti-Reflective film provides the ideal solution to reduce glare and to diffuse harsh reflections on screens affected by high ambient light and sunlight. This optical film is available as a self-adhesive retrofit product designed for installation directly to a hard screen surface or alternatively, to an additional clear acrylic or glass overlay.

The film is only 125 microns thick and transmits 90% of light, ensuring that maximum image fidelity is maintained. The matt finish also provides a super smooth low-friction surface for touch screen displays and is durable and easy to clean.

Features

- Optical anti-glare coating
- Double liner
- 125µm thickness
- 90% transmission with 12% haze
- For projection screens and flat panels

Benefits

- Reduces glare and reflections
- Simple to apply
- Minimal impact on image quality
- Retrofit to existing screens or use in new installations

Applications

- Digital signage
- Retail store windows
- Bus/train stations & airports
- Education & training
- Exhibitions & events
- Information points
- Museum & visitor attractions
