FRONT PROJECTION

UST PROJECTION

TRANSPARENT APPEARANCE

Overview

Self-adhesive optical screen film for front projection applications

A transparent holographic effect film for front projection applications

Wow your clients with a Clearvision optical front projection screen from Pro Display. Clearvision's holographic effect is a popular choice for museums, live events and product launches to name just a few examples. Clearvision is manufactured as a self-adhesive film making installation to glass or acrylic simple while the film supports ultra-short throw projection displaying an image on both sides at the same time. Transparent projection screens are guaranteed to catch attention with their contemporary design, and by creating an image that appears to float in mid-air, just like in the hit movie *Minority Report*! Clearvision is available in a range of standard screen sizes or in 10m x 1.524m rolls while Clearvision glass screens are also available on request.

Features

- Transparent holographic effect
- Thickness - 120 micron
- Haze - 20%
- Light Transmission - 90%
- 10m Roll available (1524mm wide)
- 16:9, 16:10 & 4:3 aspect ratios available

Benefits
