CUSTOM APPLICATIONS

OPTIONAL MULTI TOUCH

Overview

intouch[™] multi-touch technologies

Our transparent LCD screens bring a whole new creative angle to retail, information and entertainment displays. They provide the ease of setup of a standard LCD screen with the ability to design content

The screens come complete with USB, HDMI & VGA connections allowing you to attach a media player, PC or laptop. And in order to make designing your installation easier, an infrared remote control sensor and on-screen display interface are both included as standard.

Transparent LCD screens are intended to be used in installations where the screen controls what viewers see (or don't see) behind it. This opens up new avenues for retail displays, kiosks and booths, and is especially suited to new product launches and promotions.

The screens have a transparency of 15-20% and require a backlight. We recommend using white LED backlights rated at a colour temperature of 6000K (Kelvin).

Features

- Standard diagonal screen sizes – 32" to 84" (16:9)
- 1080p HD display (UHD 4K on 84")
- Transparent substrate
- USB, VGA and HDMI inputs
- Remote IR sensor
- Multi touch options

Benefits

- Sweet-spot sizes for legibility and reuse of existing content
- Stunning high resolution images
- Adds a genuine wow factor
- Connect media players, PCs and more
- Flexible location of control sensors
- Enhances viewer engagement

Applications

- Airports
- Bus / Train stations
- Hotel lobbies
- Retail stores
- Information points
- Museum & visitor attractions
